# THE 'HOW' OF PUBLIC AND PATIENT INVOLVEMENT IN RESEARCH

*I understand its value,  
but where do I begin?*

Public, patient involvement means that research is carried out 'with' or 'by' members of the public rather than 'to', 'about' or 'for' them. Involvement in research differs from participation and engagement. This seminar introduces the newly-established HRB-IRC PPI Ignite Programme, identifies best practices, and presents case studies focused on the "how" of public and patient engagement and involvement. This will be followed by a panel discussion on opportunities for advancing PPI in health research.
